

URGENT: YOU COULD BE AT RISK OF LOSING YOUR DATA!

Cyberthreats have grown complex and pervasive. They cannot be eradicated using a patchwork approach. A new, impenetrable dam is required.

Most data breaches—48%—were caused by malicious or criminal attacks, 25% by negligent employees or contractors (human factor) and 27% involve system glitches.

Cyberintrusions have increased 400% in the Age of COVID, with particular impacts in SMBs, and financial fraud.

There are huge financial impacts to a data breach according to *Ponemon Institute's 2016 Cost of Data Breach Study*. The average total cost of losing sensitive corporate or personal information is [approximated at \\$4 billion](#).

Cost of a Ransomware Attack

The average ransom paid in 2021 is now \$310,000 and the average downtime for an organization due to a ransomware attack is 21 days.

That's over 5% of your annual revenue lost! If you are a 10 million dollar business that's over \$500,000!

Can you afford to not be protected?

Are You Protected Against Ransomware Attacks and Data Breaches?

Which protective measures do you currently use?

<input type="checkbox"/>		<input type="checkbox"/>	
	Firewall/VPN Remote Access		Multi-Factor Authentication
<input type="checkbox"/>		<input type="checkbox"/>	
	Cloud Backups		User Education Program
