

Safeguard your business

What does Safeguard Your Business mean?

Lost or stolen mobile devices can result in lost company files and data. Malicious hackers or malware can disrupt business and steal critical data. And systems can go down unexpectedly. But you can help keep your data protected, control access to information, and restore your systems with technologies built with your security in mind.

What can you imagine for your business?

I can control who can see what information

We can safeguard data on devices that are lost or stolen

We can re-open quickly after a disaster

Our systems are protected from cybercriminals

Safeguarding your business

Employees want the freedom to access the applications and data they need on whatever PC or device they choose – whether at the office, at home, or on the road. At the same time, you need to make sure data is protected and available only to the people who should have access.

The manageable side of risk management

Microsoft provides built-in security features at every level of your technology platform, from mobile devices to PCs to servers. Because it's all Microsoft, you have peace of mind that it works together—and that the right people can access files and information.

Microsoft builds resiliency and recovery capabilities into its products and technologies, from server software to the cloud, to PCs and devices. So you can be confident your business can get back up and running, even if disaster strikes at the main office.

How to safeguard your business

- 1 Protect mobile devices**
Use features built in to Windows 10 Pro and Office 365 to lock devices, reset a user's PIN, and remotely delete information from a lost or stolen device.
- 2 Customize security**
Choose the level of security and privacy you need. You can customize security by user, by device and by location in Office 365.
- 3 Control access to your business apps**
Get to important applications and information wherever you are. Sensitive data is kept on Windows Server 2016 where it is secured and backed up.
- 4 Simplify managing mobile devices**
Take advantage of a single platform and easy-to-use tools to proactively manage desktops and devices using Windows 10 Pro, Office 365, and Microsoft Intune.
- 5 Get automatic, always-on protection**
Get robust spam and virus protection with continuous updates in Office 365. Guard PCs and devices with built-in device security in Windows 10 Pro.
- 6 Continuously back up your latest files**
Using OneDrive for Business and Microsoft Azure you always have access to your business-critical information. And Windows Server 2016 automatically saves your files to a second datacenter.
- 7 Get back to business quickly**
You get disaster recovery technology included in Windows Server 2016 and with Azure Site Recovery in the cloud.
- 8 Count on the reliability of the cloud**
Get right back to work when you rely on the financially backed 99.9% uptime service guarantee for Microsoft online services like Office 365 and Microsoft Azure.

"Our computers are our lifeline. When Hurricane Sandy hit, Hyper-V Replica saved our business."
